

U.S. SEAL MFG.

DEMAND QUALITY...

DEMAND U.S. SEAL MFG.

U.S. SEAL MFG.

Trusted Supplier of Quality Mechanical Seals and Supporting Products for more than 50 years.
Serving many industries including Agriculture, Construction, HVAC,
Mine & Ore Processing, Pool & Spa and Wastewater.

PS Line

- Aftermarket Industry Standard
- U.S. SEAL MFG. part numbers most imitated
- See catalog pages 6-101 for extensive OEM Cross-Reference
- Wide variety of designs and materials
- Seal sizes from .250" to 5.625"

Value Guard Line

- Inch sizes are cost competitive and similar to our PS Line
- Metric sizes include specialty seals for Aquascape, Ebara, Flygt, GPM, Grundfos, Hanjin, Honda Trash Pump, KSB, Travaini, Tsurumi and Wilo

VGS
VALUE GUARD SEAL

Supporting Products

Cyclone Abrasive Separators

- Nylon
- 316SS

O-Ring Kits

- O-Ring Kits for Flygt and Reliance

Replacement Seal Kits

- Seal Kits for A-C Pump, Aurora®, Gorman Rupp, Hoffman Pumps, Paco, Peerless and Taco®
- Kits contain mechanical seal and associated parts that are included in the OEM kits

Packing and Packing Accessories

- PTFE Lantern Ring Strips
- Packing Hooks, Cutters and Tool Kits
- Packing for General and Chemical Service, Severe Service, Food and Beverage Service

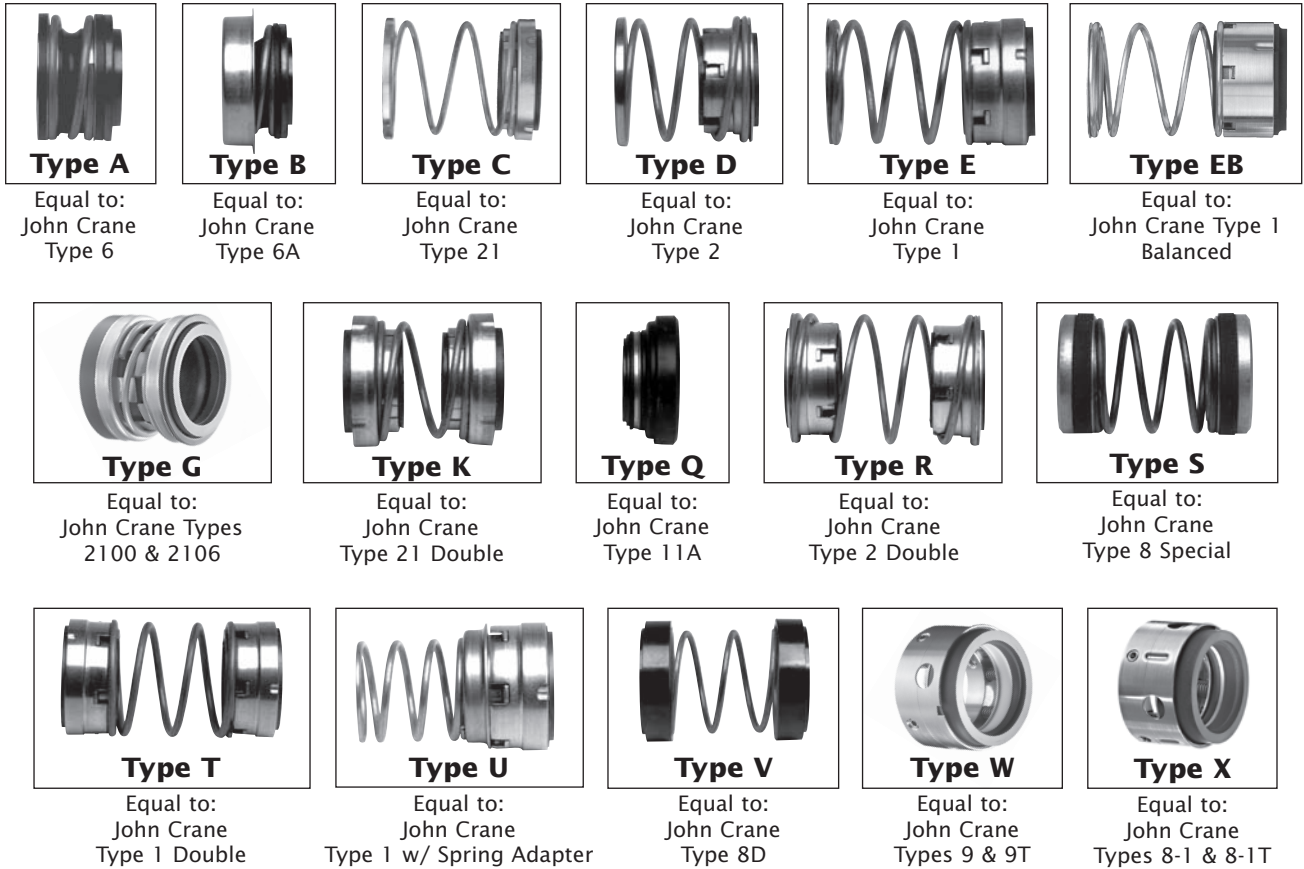

U.S. SEALUBE (Seal Installation Lubricant)

- 1 cc Pillow Pack
- 10 ml Tube
- 4 and 8 oz. Bottles

See Inside Cover for Head Types,
Mating Ring Designs, and Material Code

HOW TO USE THIS CATALOG

Using the **Pump Manufacturers' Cross-Reference** (Pages 6-101), identify the correct replacement seal for the pump manufacturers' part number. If part number is not found, refer to the **Seal Sizing Guide** on Page 4. With this information, turn to the **Dimensional Cross-Reference** section (Pages 112-161). Locate the needed seal size, then the head and mating ring type. Cross-reference with the material code to obtain the correct U.S. Seal Mfg. part number.

***Supplying a Complete Line of Quality Seals
For More Than 50 Years***

U.S. SEAL MFG. QUALITY MECHANICAL SEALS

Our seals are designed to give long life, provide automatic self-adjustment and reduce maintenance costs. Additionally, mechanical seals offer these important advantages.

ABSOLUTE SEALING

Proper selection and installation of our seals results in less pumpage loss, cleaner facilities, less fire hazard, no danger from fumes and no contamination of the fluid being pumped.

NO RUBBING FRICTION BETWEEN SHAFT AND SEAL PARTS

Replace packing with a mechanical seal and avoid expensive shaft or sleeve replacements.

FLEXIBLE SEALS MEANS LONGER SERVICE LIFE

Compared to packing, mechanical seals are more flexible, and are able to compensate for shaft deflection, axial and radial end play, vibration and seal face wear.

LESS FRICTION MEANS VALUABLE POWER SAVINGS

Mechanical seals use less friction than packing. Therefore, they require less horsepower consumption.

PRECISION LAPPED SEALING SURFACES

Positively control leakage and eliminate "break in" runs.

HIGHER SPEEDS AND PRESSURES

Our seals are designed for higher speeds and pressures.

FLAT SURFACES OF MATING FACES

Sealing surfaces are precision lapped to a flatness of one to three light bands, which maintains the necessary face film lubrication, resulting in positive leakage control.

BROAD SELECTION OF MATERIALS OF CONSTRUCTION

Our seals come in a wide variety of materials. Choose the correct combination of elastomer, metallurgy and sealing faces for your application. See pages 106-110 for the Material Recommendation Chart.

MECHANICAL SEALS CAN BE FOUND IN ...

- Centrifugal Pumps
- Compressors
- Gear Boxes
- Gear Pumps
- Jet Pumps
- Petrochemical Pumps
- Pool and Spa Pumps
- Progressive Cavity Pumps
- Rotary Lobe Pumps
- Slurry Pumps
- Submersible Pumps
- Turbine Pumps

FEATURES OF SEAL TYPES A, B, C, D, E, G, Q, W, X

TYPE A (Seal Sizes .312-1.000)

FEATURES: Compact, unitized, single spring, elastomer bellows seal. The factory-assembled, one piece design permits fast, easy installation and the full-convolution elastomer bellows provides maximum flexibility in compensating for shaft movement and wear.

SERVICES: Centrifugal water pumps, deep and shallow well jet pumps, swimming pool and wastewater pumps. Pressures to 75 PSI. Temperature: -40°F to +400°F.

TYPE B (Seal Sizes .375-1.000)

FEATURES: A full-convolution elastomer bellows provide maximum flexibility in compensating for shaft movement while torsional stress on the bellows is controlled by a dent and groove positive drive arrangement.

SERVICES: Centrifugal water pumps, sump pumps, submersible and swimming pool pumps. Pressures to 75 PSI. Temperature: -40°F to +400°F.

TYPE C (Seal Sizes .312-5.500)

FEATURES: Elastomer bellows seal, non-clogging, single coil spring, The drive band's notch design eliminates overstressing of the bellows.

SERVICES: Rotary and turbine pumps, compressors, mixers, blenders and chillers. Pressures to 150 PSI. Temperature: -40°F to +400°F.

TYPE D, E (Seal Sizes .500-5.625)

FEATURES: Self adjusting elastomer bellows compensate for abnormal shaft end play and primary face sealing wear. Effects of radial and axial shaft end play are minimized by uniform spring pressure.

Positive drive is transmitted through the drive band and drive notches, which absorb breakout and running torque. Damaging stresses on the elastomer bellows are prevented. Slippage is eliminated, thus protecting shaft and sleeve against wear and scoring. The result is long seal life.

The seal's large single-coil spring is much sturdier than a multiple spring construction design. The spring is non-clogging, self-cleaning and will not foul up due to fluid contact. Corrosion and clogging problems are eliminated.

SERVICES: All types of rotary shaft equipment such as pumps, mixers, blenders, and compressors. Wide range of services from water and steam to chemicals and corrosives. Pressures to 350 PSI. Temperature: -40°F to +425°F

Balanced Seals - Pressures to 1200 PSI. Temperature: -40°F to +450°F

TYPE D

TYPE E

TYPE G (Seal Sizes .437-3.500)

FEATURES: A compact unitized single spring elastomeric bellows shaft seal. Innovative full convolution bellows and interlocking drive band design allows for positive drive and greater tolerance to misalignment. Interference fit of primary ring insures positive drive while avoiding high face distortions associated with crimped designs.

SERVICES: Small centrifugal pumps used in Pool & Spa, Well Water, & HVAC applications. Pressures to 150 PSI. Temperature -30°F to +300°F.

TYPE Q (Seal Sizes .500-2.250)

FEATURES: Press fitted, rubber diaphragm protects metal components, spring loaded

SERVICES: Icemaker and appliance applications, general purpose food service. Pressures to 30 PSI. Temperature -40°F to +400°F.

TYPE W (Seal Sizes .500-6.000)

FEATURES: Multi Spring, PTFE wedge design for use in extreme temperatures / chemical applications. Unitized construction. Also available in a balanced design

SERVICES: Corrosive fluid applications, extreme temperatures. Pressures to 350 PSI. Temperature -75°F to +500°F.

TYPE X (Seal Sizes .250-6.000)

FEATURES: Multi Spring, O-ring design, unitized construction, flexible design compensates for shaft misalignment for high performance and longer seal life. Also available in a balanced design.

SERVICES: Wide usage in chemicals and corrosives. Pressures to 350 PSI. Temperature -20°F to +400°F.

SEAL SIZING GUIDE

1. Remove seal to be replaced from shaft and/or sleeve.
2. Make note of materials used for the old seal parts using U.S. Seal Mfg. Material Code found in the front of this catalog.
3. Identify Head type (see front cover fold-out.) Use caliper to measure inside diameter (ID) and outside diameter (OD).

SEAL HEADS – TYPES A and B

- Identify seal head type - Determine Seal Size:
- Measure the inside diameter (ID) (dimension A)
- Measure the outside diameter (OD) (dimension B)

The operating height is generally the same for all A and B seals of the same shaft size. More positive identification will result from calculating the mating ring dimensions below. If unable to positively identify the seal, consult U.S. Seal Mfg.

SEAL HEADS – TYPES C, D and E

- Identify seal head type - Determine Seal Size:
- Measure ID of the bellows (dimension A) as installed in the seal head. Add approximately .016" additional for rubber squeeze.
- Measure the head OD (dimension B)
 - Step 1. Measure the total free length (dimension C) of the rotating portion of the assembled seal. (Do not include the mating ring).
 - Step 2. Disassemble seal and measure the free length of the spring (dimension D).
 - Step 3. Take half of the measurement obtained in step 2.
 - Step 4. Subtract the figure obtained in step 3 from the measurement (dimension C) in step 1. The result is the approximate operating height of the seal.

SEAL HEADS – TYPES K, R and T

- Identify seal head type - Determine Seal Size:
- Measure the inside diameter of the bellows (dimension A).
- Add approximately .016" additional for rubber squeeze.
- Measure the head OD (dimension B)
- Calculate the operating height of the seal as follows:
 - Step 1. Measure the total length of the rotating seal (dimension C). (Not compressed).
 - Step 2. Multiply the total length (dimension C) by .73. The result is the approximate operating height of the seal.

MATING RING and GASKET

- Identify the mating ring design from those shown on inside of front cover.
- Measure OD of the gasket while assembled on mating ring and subtract approximately .016" additional for rubber squeeze to obtain bore dimension (dimension D).
- Measure the combined insert and gasket width (dimension E).
- Use the Dimensional Cross Reference guide (pages 112-161) to find the part number of the seal you need. Start with Seal Size and find the line in the tables that matches the dimensions and material code.

Features:

- Tungsten Carbide and Silicon Carbide faces for severe abrasive service.
- Solid drive band extends seal life during periods of vibration and cavitation.
- Full convolution elastomer bellows for maximum self aligning capabilities.
- Pump sleeve, o-ring and impeller shim kit supplied for ease of installation.

Features

- External Seal Design
- Pressure Balanced
- Handles Temperatures to 450°F
- Set Screw Driven for Positive Drive

Type VGXB2

NOTE: B. TAPERED SPRING
I. ABRASION RESISTANT CARBON (P66)

 TC/TC/V - Tungsten Carbide vs Tungsten Carbide with Viton® Elastomers

Features

- Compact design
- Double cartridge seal
- Faces are protected during installation
- Factory assembled as a unit
- Fool proof mounting
- Springs are isolated from the pump media

Features:

- Tungsten Carbide and Silicon Carbide faces for severe abrasive service.
- Solid drive band extends seal life during periods of vibration and cavitation.
- Full convolution elastomer bellows for maximum self aligning capabilities.
- Pump sleeve, o-ring and impeller shim kit supplied for ease of installation.

Type VGDU

Lower Seal

- Spring is covered by an elastomer boot which prevents seal clogging from stringy waste material.
- Durable Viton® elastomers and Tungsten Carbide rotating face.
- Sintered Silicon Carbide mating ring is standard.
- Dimensionally equivalent to the accompanying upper seal.

NOTE: A. MOUNTS ON SHAFT
S. SLOTTED MATING RING

USE THE RIGHT SEAL FOR YOUR POOL & SPA PUMPS

There ARE Different Seals For Different Applications

GENERAL POOL APPLICATIONS - TWO CHOICES

Industry Standard

- Used for years by pool pump manufacturers
- Materials of Construction:
 - Buna Elastomers, Molded Plastic Primary Ring, Ceramic Seat, Stainless Steel Hardware
- Proven Reliability in residential chlorine pools
- Good For low temperatures

Carbon Upgrade

- Materials of Construction:
 - Buna Elastomers, Carbon Primary Ring, Ceramic Seat, Stainless Steel Hardware
- Better Chemical Resistance

PS-200
General Service Seal

OZONE/SALT SERVICE

- Great for ozonators or salt chlorine generators
- Materials of Construction:
 - Viton® Elastomers, Carbon Primary Ring, Polished Ceramic Mating Ring, Stainless Steel Hardware
- More durable, and an upgrade to, General Service seals
- Improved resistance to heat and chemicals
- Quickly becoming the seal of choice by pool pump manufacturers

PS-3867
Ozone/Salt Service Version of PS-200

SCS/COMMERCIAL/RESIDENTIAL

- Use for your MOST demanding commercial and residential applications
- Materials of Construction:
 - Viton® Elastomers, Silicon Carbide Primary Ring, Silicon Carbide Mating Ring, Stainless Steel Hardware
- Superior materials deliver excellent abrasion, corrosion and chemical resistance
- Don't risk damage to your expensive variable speed motors
- More forgiving when pump is run dry or accidentally loses prime
- Compatible with all Pool & Spa chemicals.
- Best choice when using ozonators or salt chlorine generators

Non Pusher Seals - U.S. Seal Mfg. Type A, B, C, D, E, G, K, Q, S, T, U Pusher Seals - U.S. Seal Mfg. Type V,W,X
 Arrangement S=Single D=Double

SEAL INSTALLATION INSTRUCTIONS

1. Disassemble pump cavity to expose seal.
2. Carefully remove existing seal head and mating ring, noting where and how it was installed. Avoid scratching shaft or mating ring counterbore.
3. Clean shaft and counterbore surfaces using fine emery cloth or equivalent. Remove rust, burrs, and wipe clean.
4. Lubricate shaft, mating ring counterbore, and rubber components of both seal head and mating ring with a lubricant compatible with seal elastomers. Never use PTFE or silicone based products.
 U.S. Seal Mfg. recommends U.S. SEALUBE, which has a water based formula specifically designed to lubricate rubber. It provides a high degree of lubricity to all rubber components and maintains its wetness for a short period of time, allowing for easy installation of mechanical seals.
5. Check seal surfaces to be sure they are free of any dirt, grit, or lubricants. Use an alcohol prep pad to clean the faces before final assembly.
6. Press mating ring into counterbore, making sure that it is bottomed square. The lapped and polished faces of the new seal are easily scratched and damaged. Protect them from damage, dirt, and fingerprints.
7. Slide seal head along shaft making sure that spring is correctly engaged into seal.
8. Re-assemble pump. Turn the shaft by hand a few rotations or bump the motor to check the seals for squeals or other unwanted noises.
9. Connect the pump and motor to the system.
10. Flood the pump with water before starting. NEVER RUN THE PUMP DRY. This damages or even destroys the seal.

SEAL INSTALLATION LUBRICANT

Using the wrong seal installation lubricant will destroy your seals

HOW DOES THIS HAPPEN?

During installation, chances are the installation lubricant will come in contact with sealing faces.

Once a PTFE or silicone based product touches the seal faces, it is nearly impossible to remove.

When the pump is started, the PTFE or silicone draws the carbon from the primary ring, and smears this material on the face of the mating ring, causing a build-up which eventually destroys the seal.

Protect your seals from this certain death. Use only U.S. SEALUBE for your seal installations.

PTFE or Silicone Based Lubricants Destroy Seals

HOW CAN THIS BE PREVENTED?

U.S. SEALUBE is a water based formula specifically designed to lubricate rubber, making the installation of mechanical seals fast and easy.

It provides a high degree of lubricity to all rubber components.

It maintains its wetness for a short period of time. But unlike PTFE or silicone based lubricants which penetrate the elastomer and never allow the elastomer to grip the shaft or bore, U.S. SEALUBE evaporates.

Once the evaporation takes place, the component is dry to the touch. The lubricity is gone and will not return, even in the presence of moisture. Your seal is now locked in place.

Install mechanical seals like a Pro. Use only U.S. SEALUBE.

U.S. SEALUBE

- Safe for incidental food contact and potable water applications.
- Meets FDA Regulation 21 CFR 178.3570 and is NSF-Registered as a H1 lubricant.
- Great for all seals and elastomers.
- 15 to 20 minutes work time before drying.
- Totally evaporates, leaving no residue.

Carbon Rotating Face Viton® Elastomer 304SS Metallurgy

Mating Ring Information
Alternate Mating Ring Styles VGM-G4 and VGM-G6.
Mating Rings sold separately.
For part numbers, see pages 176-177

* Additional Mating Ring Styles and Materials Available Upon Request.

CYCLONE ABRASIVE SEPARATORS

Our cyclone separators provide a simple, yet effective, method of keeping abrasives away from the sealing faces, thereby increasing seal life and reducing maintenance costs.

Connected to the discharge side of the pump, the separator takes the abrasive-laden fluid and removes the foreign particles.

The clean fluid from the separator is injected into the stuffing box providing a positive circulation and cool environment for the seal.

Required Operating Conditions

Minimum pressure differential of 20 PSI should be maintained between pump suction and pump discharge.

Specific gravity of the particles being separated must be greater than the liquid.

Minimum particle size removed is 1 micron. Solids content of the pumped fluid should not exceed 10%.

KY-1

Material: Nylon
Temp. Range: 0°F to +240°F
Pressures up to 650 PSI

Cyclone separators are only effective with products in suspension, such as sand, iron oxide, or dirt. Product dissolved in the liquid can not be removed by a cyclone separator.

Pressures up to 2000 PSI

PACKING - STYLE 58

Graphited / PTFE Braided Packing for General and Chemical Service

Performance Capabilities

- Temperature
-350°F to +500°F
- Pressure
Pump Up to 20 bar / 300 psi
Valve Up to 275 bar / 4000 psi
- Speed
15 mps / 3000 fpm
- pH Range
0 to 14

Construction Features

Interlace Braid
Style 58 has individual continuous filament yarns which are impregnated with a high-purity graphite and high-temperature lubricant.

The graphite and lubricant assist with break-in, reduce friction, and dissipate heat throughout the stuffing box.

Call U.S. Seal Mfg. for additional styles and sizes.

Product Description

Style 58 combines the chemical-resistant and low-friction generation characteristics of continuous PTFE filament yarns with the superior heat dissipation and self-lubricating properties of graphite.

An excellent choice for chemical resistance, this nonabrasive packing provides excellent conformability, adjustability and flexibility. A superior, low-maintenance choice where minimum field adjustment and fast break-in and start-up are necessary.

Style 58 Packing is ideal for controlled leakage and extrusion resistance at high pressures and shaft speeds. When used as a multipurpose packing, inventory costs are greatly reduced.

Applications

Air, ammonia, chemicals, condensate, corrosives, gases, liquor, oils, paper stock, solvents, steam, and water

Typical Equipment

Agitators, digesters, expansion joints, mixers, pumps, reciprocating and rotating equipment, valve stems

Industries Served

- Agriculture
- Chemical
- General Industry
- Marine
- Municipal
- Oil and Gas
- Pharmaceutical
- Power Generation
- Pulp and Paper
- Steel and Metals

PACKING - STYLE 302

PTFE / Synthetic Braided Packing for General Service

Product Description

Style 302 is a cost effective general service packing. It contains no graphite.

Constructed of the highest quality synthetic fibers and lubricants. Designed to handle a wide range of fluids at moderate to high temperatures, pressures and shaft speeds.

Style 302 packing is thoroughly impregnated with PTFE in order to enhance chemical resistance, lubricity and dimensional stability. This helps to ensure even gland load distribution, promoting longer packing life.

Applications

Gases, mild acids and caustics, non abrasives, oils, solvents, steam, water

Typical Equipment

Rotating and reciprocating equipment, valves and expansion joints

Industries Served

- Agriculture
- Oil and Gas
- General Industry
- Power Generation
- Marine
- Pulp and Paper
- Municipal
- Wastewater

Performance Capabilities

- Temperature
-170°F to +500°F
- Pressure
Pump Up to 20 bar / 300 psi
Valve Up to 68 bar / 1000 psi
- Speed
Up to 11 mps / 2250 fpm
- pH Range
2 to 12

Construction Features

Interlace Braid
Style 302 has spun synthetic fibers thoroughly impregnated with PTFE dispersion plus a general service compatible lubricant.

Call U.S. Seal Mfg. for additional styles and sizes.

Construction Features

Interlace Braid
Style 303 has spun synthetic fibers treated with a proprietary blend of petroleum-based lubricants plus an external coating of graphite

Call U.S. Seal Mfg. for additional styles and sizes.

Product Description

Style 303 is a cost effective graphite-coated general service packing constructed of the highest quality synthetic fibers and lubricants designed to handle a wide range of fluids at moderate to high temperatures, pressures, and shaft speeds.

Style 303 packing is thoroughly impregnated with lubricants to fill braided voids in order to reduce product penetration.

An external graphite coating is added for lubricity and to enhance heat dissipation for increased packing life.

Applications

Gases, mild acids and caustics, non abrasives, oils, solvents, steam, water

Typical Equipment

Rotating and reciprocating equipment, valves and expansion joints

Industries Served

PACKING - STYLE 310

Polyimide / PTFE Braided Packing for Severe Service

Product Description

Style 310 is an interlace braided polyimide and PTFE packing. It is impregnated with PTFE and a high temperature break-in lubricant for smoother start-ups.

This packing offers strength, abrasion and chemical resistance along with elevated temperature & pressure capabilities.

Shaft and/or sleeve wear is greatly reduced.

Performance Capabilities

- Temperature
-170°F to +550°F
- Pressure
Pump Up to 34 bar / 500 psi
Valve Up to 275 bar / 4000 psi
- Speed
13 mps / 2500 fpm
- pH Range
0 to 12

Applications

Abrasives, acids, asphalt, chemicals, mild caustics & liquors, solvents

Typical Equipment

Agitators, brine pumps, centrifugal and rotary pumps, coal slurry pumps, mixers, pulpers, refiners, sludge pumps, stock pumps, valves

Construction Features

Lattice Braid

Industries Served

- Chemical & Pharmaceutical
- Marine
- Mining & Minerals
- Municipal
- Oil & Gas
- Power Generation
- Pulp & Paper

PACKING - STYLE 792

PTFE (FDA Compliant) Braided Packing for Food and Beverage Service

Product Description

Style 792 is a firm, yet pliable packing manufactured from the purest PTFE filaments.

Also an excellent choice for chemical resistance, this packing is free from color contamination for applications where color contamination can not be tolerated.

Style 792 contains a food grade lubricant which provides faster break-in and reduced shaft wear.

Performance Capabilities

- Temperature
-450°F to +500°F
- Pressure
Pump Up to 20 bar / 300 psi
Valve Up to 170 bar / 2500 psi
- Speed
10 mps / 2000 fpm
- pH Range
0 to 14

Applications

Food and Beverage packaging
Pharmaceutical production

Typical Equipment

Rotating and reciprocating equipment, valves

Industries Served

- Food and Beverage
- Pharmaceutical

Construction Features

Lattice Braid

Style 792's PTFE filament is compliant with FDA regulation 21 CFR 177.1550.

PTFE LANTERN RING STRIP

Performance Capabilities

- Temperature
-400°F to +500°F
- Pressure
Pump 68 bar / 1000 psi
- Speed
Not Applicable
- pH Range
0 to 14

Construction Features

4 Foot Strip

Product Description

PTFE lantern rings are widely used in applications where outside lubrication is necessary in order to keep packing lubricated, cool, and flushed of abrasives and chemicals. The use of lantern rings greatly increases the life of compression packing, resulting in less maintenance and downtime over the life of the equipment.

PTFE lantern rings will handle a wide range of fluids, offering maximum corrosion resistance and, unlike metallic rings, will not gall or score shafts or sleeves. They have also been successfully used in bearing assemblies as a conduit for grease or oil. The lantern ring works in aiding movement of the lubricant without risk of contamination or excess stuffing box wear.

Applications

Air, ammonia, boiler feed water, chemicals, condensate, corrosives, gases, liquor, oils, paper stock, solvents, steam, water

Typical Equipment

Rotating and reciprocating equipment, valves

Industries Served

- Chemical
- General Industry
- Mining and Minerals
- Municipal
- Oil and Gas
- Pharmaceutical
- Power Generation
- Pulp and Paper
- Steel and Metals
- Wastewater

If the products featured will be used in a potentially dangerous and/or hazardous process, your U.S. Seal Mfg. representative should be consulted prior to their selection and use. In the interest of continuous development, U.S. Seal Mfg. reserves the right to alter designs and specifications without prior notice. It is dangerous to smoke while handling products made from PTFE. Old and new PTFE products must not be incinerated.

IDENTIFYING CAUSES OF SEAL LEAKAGE

Symptom	Possible Cause	Corrective Procedure
1. Cracked or broken mating ring.	Seal ran dry and heated up. When liquid reached seal faces, it was cooler and caused thermal cracks.	Check to insure seal chamber is full of liquid before starting pump. On high temperature applications, insure proper flushing at seal faces.
2. Carbon primary ring scored and grooved.	Dirty system.	Have system cleaned and flushed. Consider installation of a cyclone abrasive separator (see page 178).
3. Short seal life in treated system.	Treatment level and temperature higher than anticipated.	Advise U.S. Seal Mfg. of product temperature and PPM Treatment level, for alternate seal recommendation.
4. Primary ring worn unevenly.	Seal improperly installed.	Check installation instructions for proper assembly.
5. Bellows hard and brittle. Rapid carbon wear.	Temperature too high. Pump may have run dry and cavitated.	Cool seal chamber. Use EPR or Viton® elastomers, high temperature carbon, Ni-Resist or Tungsten Carbide mating rings.
6. Bellows soft and sticky. Appears to be dissolving.	Bellows not compatible with material being pumped.	Consult U.S. Seal Mfg. for recommendation, advising pumpage and temperature.
7. Retainer drive tabs badly worn or broken.	Vibration or coupling misalignment. Periodic loss of lubrication at seal faces.	Realign pump and motor. Insure proper flushing at seal faces.
8. Flexible bellows broken.	Coupling misalignment.	Realign pump and motor.
9. Seal wears out shaft.	Shaft end play. Radial shaft movement. Shaft not straight.	Replace bearings. Replace shaft.

WARRANTY

U.S. Seal Mfg. warranties its seals, material and workmanship will meet applicable manufacturers' specifications and will perform according to industry standards, providing the purchaser has selected the correct seal and material and proper installation has been made by the end user.

Since it is beyond our control to assure proper selection of materials or ensure proper installation, U.S. Seal Mfg. assumes no responsibility for damage after its products have been installed.

Any product found to be defective prior to use or installation will be replaced without cost or the purchase price will be refunded at our option. This is the maximum of our liability. The sale of any U.S. Seal Mfg. product under any other warranty or guarantee, expressed or implied, is not authorized by U.S. Seal Mfg.

The foregoing is in addition to Seller's Standard Terms and Conditions of Sale which shall apply to all sales. Copies available upon request.

UNABLE TO FIND THE SEAL YOU REQUIRE?

Complete this worksheet and fax to U.S. Seal Mfg. at 877-849-7325
OR

E-mail completed worksheet and pictures to info@ussealmfg.com

EQUIPMENT DATA

1. Pump Mfg. Name. (Found on Nameplate) _____
2. Model Number _____
3. Serial Number _____
4. Seal Part Number _____

SEAL DESIGN - See Front Cover Fold-Out

1. Head Type _____
2. Mating Ring Type _____
3. Manufacturer _____
4. Manufacturers' Part Number _____

OPERATING CONDITIONS - *This Section MUST Be Completed*

1. Product Handled _____
2. If Concentrated, What %? _____
3. Temperature F. _____ C. _____

DIMENSIONAL DATA

- A. Shaft / Sleeve OD _____
- B. Counterbore of Stuffing Box _____
- C. Bore of Gland for Mating Ring Unit or Housing _____
If pump is equipped with a stuffing box,
what is the counterbore? _____
- D. Width of Mating Ring _____
- E. Operating Height of Seal _____
- F. OD of Seal _____

Your Name and Company _____
Phone _____ Fax _____
E-mail _____

Need To Send a Sample For Identification?

- Please include this completed form.
- It is most important that we know the service conditions. i.e. What Are You Pumping?
- Samples must be clean. Please include a copy of the MSDS form.
- Please Note - **Seals received not cleaned will be returned without identification.**
